

VEKSØ's Mobility Department fortified!

VEKSØ's mobility consultant, Marie V. Magni, just concluded her qualifying BYPAD training at FGM-AMOR (the Austrian research and mobility institute in Graz). Like mobility consultant Marianne Weinreich, Marie is now qualified to conduct BYPAD processes for Danish municipalities.

What is BYPAD?

BYPAD (Bicycle Policy Audit) is a process tool for the evaluation and quality assurance of municipalities' efforts with cycle traffic and the promotion of cycling. The instrument was developed by a number of European cycling experts and more than 120 cities in 22 countries have been BYPAD certified over the last 7 years. Read more about BYPAD advantages and benefits [here](#).

Marie about the training ...

"It has been an incredibly exciting process and I have received lots of rewarding input to our future work. If we compare Denmark with other European countries, there is no doubt that we have a great basis for working with cycle traffic. Denmark is a pioneer country in many ways; at the same time it has been very inspirational to exchange experiences with our European neighbours – not least hearing about best practices and the many BYPAD success stories from other countries. Veksø has already conducted a BYPAD audit of the Municipalities of Aalborg and Sønderborg, and I hope that many more will have the pleasure of this well-developed and thoroughly tried quality tool for the promotion of cycling in their municipalities".

Yes! That's how it looked when a bunch of proud, happy and newly hatched auditors presented their certificates!
